

Job Title:	Biomedical Scientist
Location:	Cambridge
Start:	ASAP
Terms:	37.5hr/week, Permanent Role
Salary:	Competitive salary with staff benefits including private health insurance, pension contributions and 25 days annual leave.

Job Summary

As a Biomedical Scientist you will be responsible for routine clinical tasks and reporting, in the CCL laboratory.

Main duties and responsibilities:

- Booking in clinical samples
- Running clinical laboratory procedures to assist the clinical team with improved efficiency
- Referring clinical samples to external laboratories where relevant
- Routine laboratory housekeeping duties
- Monthly stock checks
- Routine maintenance of instruments and systems
- Maintain up to date knowledge in the relevant areas of clinical biology and recent diagnostic developments
- Leading the NGS testing section and answering both internal and external queries
- Authorising clinical reports for dispatch to customers
- Contributing to the QMS in the form of updating and reviewing controlled documents, reporting on performance of the services, attending and providing training
- Other duties as reasonably requested with regards to the functioning of the clinical laboratory.

Qualifications and experience required:

- BSc in Biomedical Science or equivalent
- HCPC Registered
- NGS experience essential
- Molecular diagnostics skills including PCR, nucleic acid extraction and RNA handling
- Experience of clinical diagnostics, human genetics, biochemistry and/or clinical microbiology
- Previous experience of working within an accredited clinical laboratory and familiarity with quality and regulatory standards
- Computer literate
- Self-motivated, good communication skills and a team player.

Working at CCL

A great place to work

CCL is a great place to work. Our team is experienced, dedicated, and loyal and we acknowledge that. We enable CPD, encourage innovation and practice a no blame culture. We work as a team and get rewarded as a team, and we also have fun together.

About CCL

Cambridge Clinical Laboratories started its journey in 2005. The objective for the company then was to offer personalised medicine and introduce new novel technologies and assays to help UK healthcare. This is still very much the aim today.

We have an extraordinary team of experienced biomedical scientists and lab technicians. Our people are core to CCL's stability – many who have been around since we started.

2020 threw a huge curveball for the world in the form of the Covid-19 pandemic. We reacted quickly and supported the UK's efforts with care home, hotspot and private testing. As the dust settles, we return to our roots; concentrating on how we can support the NHS to recover, looking at what new technologies we can introduce to the UK market, and how we can help individuals take personal responsibility for their health.

Revolution of healthcare

The age of personalised medicine is now well established. Everyone needs to be seen and treated as an individual. As diagnostics and therapeutics develop to meet this rapidly changing need CCL will be there to provide a first-class service alongside state-of-the-art tests and treatments.

We will continue to expand our current offering of services in Oncology and Virology, but also develop into new areas of healthcare. We are living in revolutionary times with regards to personalised healthcare diagnostics and specifically targeted therapeutics. We plan for CCL to be at the forefront of that revolution.

Join us.
